Keeping It Together

- HTML formatting is not done by simply putting spaces in, it is controlled with tags
- `<p></p>` - This is the paragraph tag and all text between the `<p>` and `</p>` is treated as a single group of text
- `<br>` is a different tag in that it does not need a friend tag - it works alone and creates a line break
 - So this would `<br>` look like this

So this would
look like this

Getting Into Lists

Styling &
Lists

- `<ul>`, `<ol>`, and `<li>` - These three tags work together to create bulleted and numbered lists
- `<ul>` is for an unordered list, *i.e.* a bullet list
- `<ol>` is for an order list, *i.e.* a numbered list

```
<ul>  
  <li>First item</li>  
  <li>Second item</li>  
  <li>Third item</li>  
</ul>
```

- First item
- Second item
- Third item

```
<ol>  
  <li>First item</li>  
  <li>Second item</li>  
  <li>Third item</li>  
</ol>
```

1. First item
2. Second item
3. Third item

The Secret Behind the Scenes

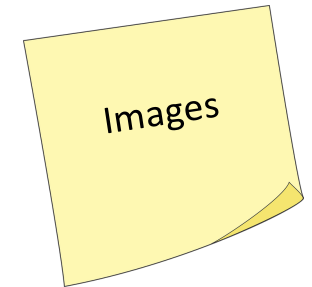

Tables

- The easiest way to arrange content on a page is to make use of tables
- Tables allow you to arrange your content in rows and columns
- The three main elements of a table are:
 - `<table></table>` - This defines the start and end of the table
 - `<tr></tr>` - This defines the row
 - `<td></td>` - This defines the data in a row, aka columns

```
<table>
  <tr>
    <td>Row1/Col1</td>
    <td>Row1/Col2</td>
  </tr>
  <tr>
    <td>Row2/Col1</td>
    <td>Row2/Col2</td>
  </tr>
</table>
```

Row1/Col1	Row1/Col2
Row2/Col1	Row2/Col2

Add Beauty

- Text is great, but without images a website is pretty boring
- `<img>` - This is the tag that is used for inserting images

``

- The part in after **img src** is the name of the image to be displayed. The image is not technically inserted into the page, the tag indicates where the image will display. The image is stored on the web.
- **alt** – this is like alternate text – seen when you hover over an image
- **height** and **width** specify the image size if you want to change it. Leaving this out means the original image size will remain
- BE CAREFUL of loading images that are too large, it will slow down your webpage
