

Here are the steps to create a resource group in the Azure Portal:

Sign into the Azure Portal:

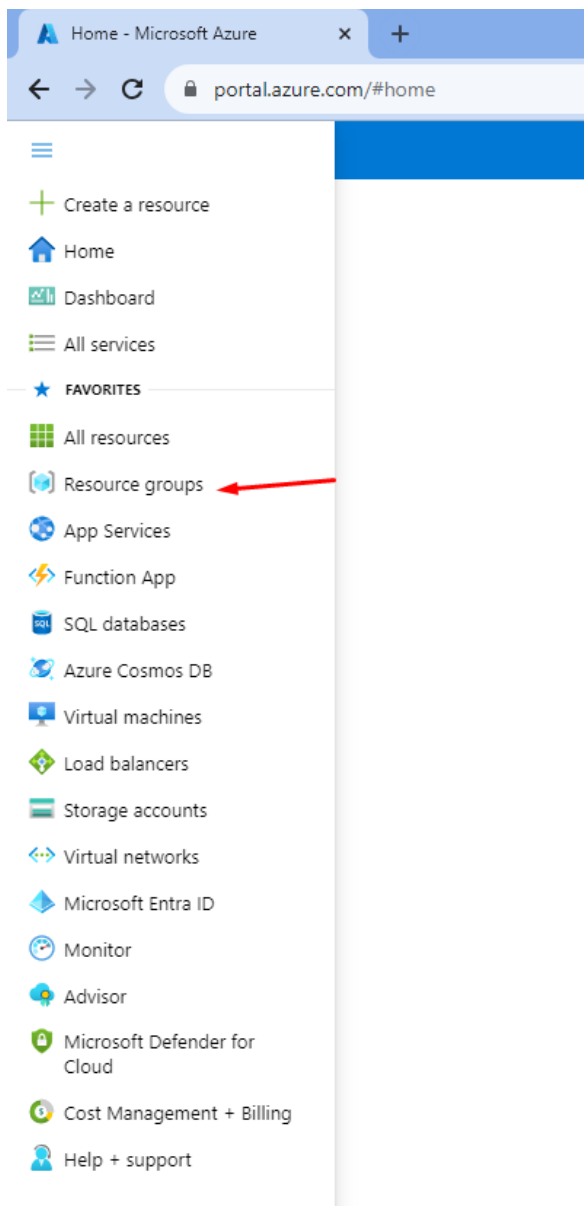

Open your web browser and navigate to the [Azure Portal](https://portal.azure.com).

Sign in with your Azure account.

Navigate to Resource Groups:

In the Azure Portal, click on the "≡" icon in the upper-left corner to open the menu.

Scroll down to the "Resource groups" section and click on it.

Create a new Resource Group:

In the Resource groups blade, click on the "+ Add" button to create a new resource group.

Create a resource group

Basics Tags Review + create

Resource group - A container that holds related resources for an Azure solution. The resource group can include all the resources for the solution, or only those resources that you want to manage as a group. You decide how you want to allocate resources to resource groups based on what makes the most sense for your organization. [Learn more](#)

Subscription: Choose the Azure subscription to which you want to associate the resource group.

Resource group: Enter a unique name for your new resource group.

Region: Select the Azure region where you want to create the resource group. This is the region where metadata about the resource group is stored.

Review and create:

After filling in the details, click on the "Review + create" tab to review your settings.

Review and create:

Review the information to ensure everything is correct. If there are no issues, click on the "Create" button.

Deployment:

The deployment process will begin. You can monitor the deployment progress on the deployment blade.

Deployment Complete:

Once the deployment is complete, you will receive a notification, and you can click on the "Go to resource group" button to navigate to the newly created resource group.

Congratulations! You have successfully created a resource group in Azure. Now, you can start deploying and managing resources within this resource group to keep them logically organized.
