Website of Webpage

Making a 2nd
Page

- A Website is a collection of webpages – The key is to create multiple webpages and connect them
- Create a second page in Sublime Text editor – remember to add .html
- Either copy the html from the first page or begin with a blank template by typing html and pressing TAB

Making some Space

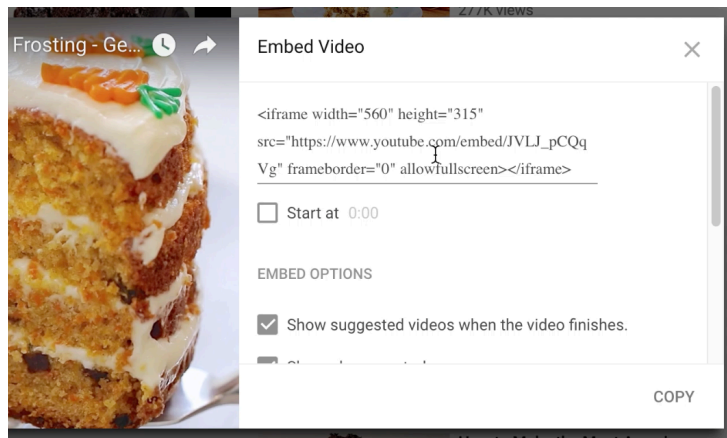

- Tables are a great way to organise how your page looks
- Ordered `<ol>` and Unordered `<ul>` Lists also allow you to make things a little neater
- Sometimes you need to add a bit of padding
- Adding spaces in html is done using ` ` – non-breaking space
- Multiple `   ` will insert more spaces
- **WARNING** – This is not the best way to format, there are better CSS controls (but that is for another course)

[illegible]

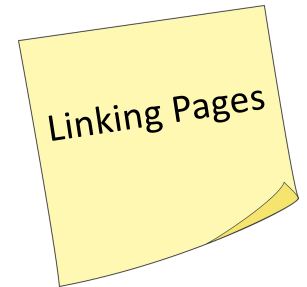

Adding Video

- In addition to images, video helps make your site engaging
- Find (or upload) a video to YouTube
 - Click Share
 - Click Embed
 - Copy the code
 - Paste the code inside the `<body></body>` section
- Adjust the width and height – It must be proportional or else you'll get a squashed video
- <http://scriptygoddess.com/resources/proportioncalc.htm> - tool to calculate rescaling proportions

Linking Pages

- This is how to create a text link to another page

```
<a href="myfile.html">
```

Click here to see my file

```
</a>
```

- First line is the page you want to link to
- Second line is the text you want to hyperlink
- Third line is the close of the anchor tag

[Click here to see my file](#)

- This is how to create an image link to another page

```
<a href="my-webpage.html">
```

```

```

```
</a>
```

- First line is the page you want to link to
- Second line contains a link to the image
- Third line is the close of the anchor tag
